

ON MATTERS OF HEALTH

Jimmie Holman & Paul Dorneanu

PULSED TECHNOLOGIES

Mr. Holman and Mr. Dorneanu are the cofounders of Pulsed Technologies Research, LLC (USA) and BioEnergetics and Pulsed Technologies SRL (Europe), the leading providers of precision equipment for innovative technical strategies and solutions. Holman, Dorneanu, and the PulsedTech team work with leading, innovative practitioners and researchers worldwide to provide the very finest in resonant frequency research instruments.

On Matters of Health

Jimmie Holman & Paul Dorneanu

Most of us in western society have learned the mindset since birth, that when it comes to matters of one's health, we typically wait till there is a problem, then take "it" and ourselves to the doctor, and literally dump our self and the issue on the doctor to solve the problem.

In actuality, what we are doing, is either realizing, recognizing, or otherwise admitting we have a problem... then as quickly as practical, (and there is often much reluctance and procrastination with many), we go to the doctor, not so much for an "assessment" as to dump the problem on the doctor to take care of. In psychological terms, this is "transference"¹. This, possibly unconscious effort, is simply the way we have been trained!

While this methodology may have worked earlier in our lives, the allopathic medical system has evolved to one which is failing us now and will most assuredly fail us more on into in the future. With the reported average time most allopathic practitioners have of spending only seven (7) minutes to visit and assess their clients condition and needs, the level of individualized care simply HAS to suffer.

Conventional Medicine is Failing Us

Conventional medical treatment has changed... DRASTICALLY... and not always for the better. Technological advances do not necessarily equate to available procedures. Technology has evolved, many improvements most assuredly have been incorporated into today's western medicine, and some remarkable new life-saving procedures and drugs have been made available. However, the day-to-day health care needs and routine office visits have also drastically changed. The previous private practices, the family doctors we once knew, have given way to the corporate owned clinics, the "Emergency Care clinics" (aka: Doc-in-a-Box... the fast food version of the former), each has their place, but few have the resources, time, or ability to give the individualized attention to the unique needs we once expected. The regulations, limitations, and liabilities have changed the health care system we once knew, and is likely gone forever.

As the "socialization of medicine" becomes more predominant, this problem is only going to become worse as no provisions are being made for effective alternatives. Those countries that have already adopted those socialized models have drastically reduced the efficiency and effectiveness often to simply the prescription of expensive toxic controlled substances which each may introduce their own "new" unique set of problems, effectively cascading the individual to even new lows in "health and wellness" with the damage possibly being long term or permanent.

Many folks have realized these changes, either through their critical needs not being met, or via complete failure for a treatment (simple or critical) to bring about an effective healing response, despite enormous amounts of time, effort, and money being expended. In many cases, the treatments have made the situation far worse or caused additional complications (aka side – effects).

Those able to recognize the situation, (admittedly not everyone can), will often then seek self-education and migrate toward alternative and integrative practitioners

¹ Wikipedia - <http://en.wikipedia.org/wiki/Transference>

Transference is a phenomenon characterized by unconscious redirection of feelings from one person to another. One definition of transference is "the inappropriate repetition in the present of a relationship that was important in a person's childhood."^[1] Another definition is "the redirection of feelings and desires and especially of those unconsciously retained from childhood toward a new object."^[2]

Still another definition is "a reproduction of emotions relating to repressed experiences, especially of childhood, and the substitution of another person ... for the original object of the repressed impulses."^[3] Transference was first described by [Sigmund Freud](#), who acknowledged its importance for [psychoanalysis](#) for better understanding of the patient's feelings.

for the treatment and guidance we as a society once had as part of allopathic treatment but has seemingly been left far behind. In the USA, conventional doctors are severely restricted via regulation as to the methods and substances they can now recommend. Failure to conform to "standard of care"² which is increasingly limited to pharmaceuticals and/or specific controlled medical procedures places the conventional allopathic practitioner at risk of censure, peer pressure, fines, reprimand, loss of hospital privileges, loss of medical license, even financial liability. It is no wonder critical thinking, personal innovation, and in the end, the desired results are less than optimal.

When privately discussing these issues and concerns with various licensed M.D.s here in USA, our words can't even begin to convey the helplessness many of them have expressed to us. More often than not, the message: "My hands are tied." or frankly admitting "My practice is no longer mine." The private practices we once knew have all but died out giving way to the corporate practices and clinics. The looming changes occurring now within the conventional medical system only promise to become more expensive, problematic, elusive, and collapsing to the point of ineffective use.

The HEALING ART vs. the BUSINESS OF MEDICINE

Alternative and integrative practices are coming in to fill a rapidly exploding niche where the conventional medicine is largely failing or has failed completely.... or where people have gotten so disgusted with a system that is not meeting their personal needs from an educational or results perspective. This may include those who have been under years of failed conventional treatment and are now looking at alternatives as a last resort but still with the same typical "heal me" mindset.

As a general rule, alternative practitioners do not have the same restrictions and are more able and genuinely willing to spend the needed time required to better assess their clients' needs, expectations, question, and goals. Many actually have medical credentials and background but are not or no longer operating under their medical license. While most alternative practitioners are not or no longer able to prescribe pharmaceuticals or perform conventional surgeries, they are free to recommend or provide natural substitutes and procedures, typically without the expected toxic

² Wikipedia - http://en.wikipedia.org/wiki/Standard_of_care (re: Medical standard of care)

A **standard of care** is a medical or psychological treatment guideline, and can be general or specific. It specifies appropriate treatment based on scientific evidence and collaboration between medical and/or psychological professionals involved in the treatment of a given condition.

Some common examples include:

Treatment standards applied within public hospitals to ensure that all patients receive appropriate care regardless of financial means.

[Standards of Care for the Health of Transsexual, Transgender, and Gender Nonconforming People](#)

1. Diagnostic and treatment process that a clinician should follow for a certain type of patient, illness, or clinical circumstance. Adjuvant chemotherapy for lung cancer is "a new standard of care, but not necessarily the only standard of care." (*New England Journal of Medicine*, 2004)

2. In legal terms, the level at which an ordinary, prudent professional having the same training and experience in good standing in a same or similar community would practice under the same or similar circumstances. An "average" standard would not apply because in

that case at least half of any group of practitioners would not qualify. The medical malpractice plaintiff must establish the appropriate standard of care and demonstrate that the standard of care has been breached, with expert testimony.

3. A physician also has a "duty to inform" a patient of any material risks or fiduciary interests of the physician that might cause the patient to reconsider a procedure, and may be liable if injury occurs due to the undisclosed risk, and the patient can prove that if he had been informed he would not have gone through with the procedure, without benefit of hindsight. (Informed Consent Rule.) Full disclosure of all material risks incident to treatment must be fully disclosed, unless doing so would impair urgent treatment. As it relates to mental health professionals standard of care, the California Supreme Court, held that these professionals have "duty to protect" individuals who are specifically threatened by a patient. [*Tarasoff v. Regents of the University of California*, 17 Cal. 3d 425, 551 P.2d 334, 131 Cal. Rptr. 14 (Cal. 1976)].

4. A recipient of *pro bono* (free) services (either legal or medical) is entitled to expect the same standard of care as a person who pays for the same services, to prevent an indigent person from being entitled to only substandard care.

Medical standards of care exist for many conditions, including [diabetes](#), some [cancers](#), and [sexual abuse](#).

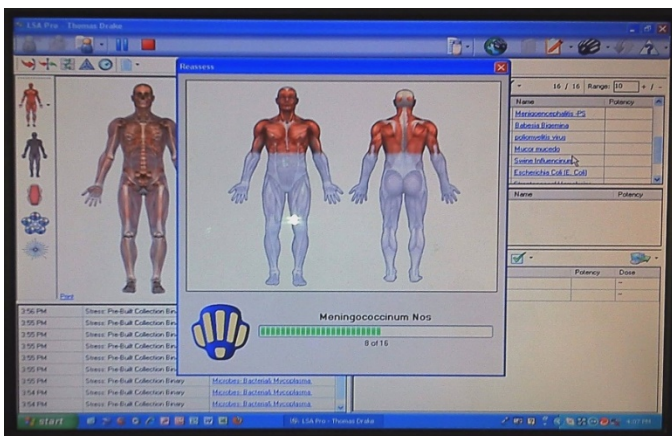

side-effects and associated health concerns that **MUST** ALSO be closely monitored.

Dr. Julia Schulenburg, N.D., of the Center for Holistic Healing providing assisted wellness assessment for client.

Client is able to monitor and better understand testing relationships to associated health concerns

Comprehensive Issues can be assessed via non-invasive means.

Today's Alternatives

There are of course many fine, decent, and competent MDs. This article should in no way be pointing the blame at them. The failures of the allopathic system and the limitations induced by their restrictions, are largely the result of a system conventional doctors have become entrapped within. In many ways, they too are also the victims of a coordinated change and are now defenseless being only allowed certain tools and increasingly less effective weapons and resources with which to effectively battle.

You as the client **DO** still have the opportunity to change and refocus. While alternative practitioners may provide the much needed technical support and guidance, it is ultimately **YOU** the individual that make the major choices and changes! After all, it really **IS** all about **YOU**!

"Americans spend about \$34 billion annually on alternative medicine, according to the first national estimate of such out-of-pocket spending in more than a decade.

Chiropractors, acupuncturists and herbal remedies are commanding more consumer dollars as people seek high-touch care in a high-tech society, the report released Thursday by the government shows."

AP

*Associated Press,
Updated 7/30/2009*

This reference, mentioned above, is actually founded in a NIH/NCCAM government survey, article³ (attached), and formalized by Rand Corporation study where they determined:

"Complementary and alternative medicine services in the United States are an approximately \$9 billion market each year, equal to 3 percent of national ambulatory health care expenditures. Unlike conventional allopathic health care, complementary and alternative medicine is primarily paid for out of pocket, although some services are covered by most health insurance. Examining trends in demand for complementary and alternative medicine services in the United States reported in the Medical Expenditure Panel Survey during 2002–08, we found that use of and spending on these services, previously on the rise, have largely plateaued. The higher proportion of out-of-pocket responsibility for payment for services may explain the lack of growth. Our findings suggest that any attempt to reduce national health care spending by eliminating coverage for complementary and alternative medicine would have little impact at best. Should some forms of complementary and alternative medicine—for example, chiropractic care for back pain—be proven more efficient than allopathic and specialty medicine, the inclusion of complementary and alternative medicine providers in new delivery systems such as accountable care organizations could help slow growth in national health care spending."

Voting with Your Health Care Dollar

Admitting that 38 percent of adults use some form of complementary or alternative medicine, and considering these funds are largely out of pocket and **NOT supplemented via insurance or subsidies**, this clearly indicated that folks are **"voting with their health care dollar"**. When one considers that this would likely not occur were the conventional allopathic channels providing effective and affordable treatment solutions. Considering the solutions and control the end-users

exhibits and experiences are added to the equation are based largely on past experience and effectiveness, it is logical these new "hands-on alternatives" have become the CHOICE and preference of these users!

THIS IS SIGNIFIGANT!

The "Hands-On Approach" of many alternative practitioners is becoming the "Hands Down Choice" of many.

Ironically the admission that alternatives represent such a significant portion of the total expended health care dollar, it is a complement to the existence of such a choice. Simply throwing money at a problem rarely provides the solution Rather one should more likely logically and personally examine new possibilities and vote by choice with their precious health care dollar!

Transition to Alternatives

The "already" Health Conscious are often the first to make the transition to alternative health care. As part of their health care awareness, and self-education into the importance of foods, nutrition, and exercise, the needs for constant medical care subside drastically. Quality of life improves noticeably. Likewise, the need for critical traditional allopathic care and treatment typically subsides exponentially.

The health conscious having already (by this point) experienced the health and wellness benefits of good nutrition have a much better background and capability to communicate with their selected practitioner on not only a technological level, but an emotional and philosophical level, as well to better meet their individual and uniquely personal needs.

Taking Control of YOUR Matters of Health

If you are reading this article, chances are really good you have already, or are in the process of taking the first steps to taking back control of your health. A close friend or caring practitioner has likely suggested you investigate a particular area of interest or concern.

Educate yourself

If you have a health concern, read up ahead of time. Familiarize yourself with past and current alternatives. In many cases, older alternatives provide more effective results but are not known or trained in conventional allopathy as the focus there is largely on patentable (expensive/profitable) pharmaceuticals. In many cases, the conventional doctor is unaware of historically documented, natural, inexpensive and effective alternatives without toxic or detrimental side effects.

Better Health through Awareness

One of the very best resources we have found for readable content

is the World Research Foundation Library in Sedona Arizona. The World Research Foundation Library contains over 30,000 books of information on all forms of health therapies and treatments from around the world.

Realizing that many people cannot physically visit the library or do not have the time necessary to conduct thorough research, they continually review the volumes (as well as thousands of articles from magazines and medical journals) and organize the data into information packets. Each packet typically contains from 300 to 500 pages of previously published material on a specific medical problem and therapies that have been used. These packets can save hundreds of hours of wading through the thousands of books that are housed at the WRF library.

These health information packets⁴ are highly recommended and well worth the modest price. Almost every one of Pulsed Technologies Research projects BEGIN with the purchase of one or more of these packets.

Dr. Nenah Silver's excellent Rife Handbook has become the *de facto* standard of the art. When it comes to the devices and instruments available to the public, no book does a better generalization and explanation of important concerns and issues. If you have only one book on the subject of resonant frequency technology, THIS should be the one.

<http://www.NenahSilver.com>

The CAFL (Consolidated Annotated Frequency List) ... the best public "starting point" for those with no other resources for application frequency sources. PulsedTech includes a version of the CAFL as a sample library as well as a converted high frequency version so as to utilize the higher performance specification of the newest generation instruments.

<http://electroherbalism.com/Bioelectronics/FrequenciesandAnecdotes/CAFL.htm>

Find a good practitioner

Get comfortable with them. Find more than one if you can. Locate a good N. D., locate a good chiropractor, a good acupuncturist, etc., Use what you need, ... and be amazed when you find how well they cooperate and integrate with one another and the synergistic manner in which their strategies work while answering questions without being offended or threatened as often the experience within the conventional system. The alternative or integrative practitioner realizes this is your health. It truly is about YOU! and YOUR HEALTH!... (NOT their pride)

⁴ World Research Foundation- Health Information Packets can be purchased online, at the WRF [health library](#) in Sedona, Arizona, or by calling (928) 284-3300. The cost for each search packet is shown

below, plus shipping and handling. For delivery outside of the United States, there is an additional shipping charge of US\$10.00.

If you don't know where to turn, ask one of your exceptionally healthy looking friends or coworkers... they probably know!

A **professional** capable of the *guidance and monitoring* YOU need is invaluable. There are advantages to most of the different types.

M.D. – a conventional Medical Doctor likely can NOT provide all the services you desire. If you are now considering change, it is likely they have already repeatedly failed for your situation. However, a M.D. is able to arrange or provide medical tests and screenings as well as prescribe pharmaceuticals should they be necessary.

M.D. practicing “Integrative Medicine” – While operating under a conventional license, this type of practitioner is much more open and realizes the benefits of alternative treatments. The structure of their practice often incorporates or is in association with other alternative practitioners to provide a more holistic approach. Like the conventional M.D., they can provide access to conventional tests, services, and prescriptions not available to the alternative practitioner.

N.D. – the Naturopathic Doctor can be an excellent choice as the skills and their education are ongoing and not limited to traditional prescreened literature. The N.D. is often at the very cutting edge in available electronic assessment and support technology and has incorporated into their treatment and guidance recommendations or procedures. They have typically spent the extra time required to understand and validate and compare available options providing the end-user a “shorter path” in times of critical need.

Osteopaths (D.O.), Homeopaths, Chiropractors, Acupuncturists, etc. – while probably not fair to combine this group, each typically has some understanding, commonality and each has unique perspectives and offerings. Most important, each has a much more natural methodology than that limited by conventional allopathy.

Clinical Technicians – the support personnel, the operators at many facilities are often the most knowledgeable when it comes to equipment, and operations. They have often been the ones in the very best position to compare and assess the usefulness and see first-hand the results produced. It is the “operators”

that may be in the best position to guide a person on operation specific to the end-users unique needs.

Supports Groups – as an education and referral source, the support group is invaluable. Be it a group organized by an individual practitioner to support their clients, or a community group that has come together to assist others like themselves suffering from a common ailment, can provide the information exchange and comparisons while also getting hands-on practical instruction should they decide to obtain equipment for personal use.

Associate Engineer Daniel Drake performing detailed functional and critical analysis of competitive equipment.

Important Note: certain proprietary information and protocols ONLY available via practitioner may also be made available through these support groups as part of ongoing research projects.

Get Equipment

If your needs are critical, the practitioner will likely recommend specialized tools and supplements to help with your situation that need to be used EVERY day ... not just the regularly scheduled office visit. Each suggestion may work synergistically to enhance delivery and effectiveness of the other. Together this may provide the LIFE SAVING combination required for full recovery to a healthy state, (something that is becoming uncommon in traditional care). The skills, observations, resources and detailed knowledge provided by your guide are key to your effective self-treatment. Well-designed instruments are created for multi-use and adaptable to current and future needs even in times of "wellness".

The most expensive equipment is NOT always the best or most effective solution. A practitioner who understands the biophysical needs is your best guide to determining your immediate needs.

Probably one of the most critical considerations in choosing equipment is the level of technical research and expertise that has gone into its design. Few manufacturers in this field have quite the backgrounds, associations and experience as does the PulsedTech team, both in North America and Europe. Strategic technical assessment as well as detailed analysis and biological research have allowed PulsedTech to maintain technical superiority in this field.

The exhaustive proprietary and innovative biological validation has been critical in targeted and characteristic development in areas other manufactures have not yet even discovered.

Strategic biological experimentation and validation is crucial to advancement of the science and technology.

While superior products ARE important, buying directly from the manufacturer is not necessarily the best solution ...especially in times of critical need. Some instruments are ONLY sold via practitioners or their direct referral because of the required guidance.

The practitioner typically sells at the same price (or less) than the manufacturer. The practitioner can offer a level of guidance and personal instruction the manufacturer is often legally prohibited from offering to the end-user. Of important note, those cases where the practitioners' price is higher than manufacturer's retail price, what is being sold typically is either part of a proprietary system developed by the specialist or includes a level of medical, clinical, or other services and is not an equal comparison.

Clinical Technician Jordan DeJonge of the Born Clinic demonstrating practical use of instruments to client

Self-Treatment

Health and Wellness begins at home. YOU are the most important aspect to the path to prime wellness. Today's instruments are designed for practical ease of use while incorporating familiar tools easily or already available in most homes as a significant money saving aspect. Much consideration has gone into design to allow for the least personally invasive while maximum effective impact on the situation being addressed.

Prepare for the Future

The best strategy is to arrange NOW for immediate needs, but also consider and prepare for future needs! These instruments have been called by many "The Prepper's Electronic First Aid Kit".

Dr. Margaret Chan, Director-General of the World Health Organization, shockingly revealed in a recent keynote address in Copenhagen:⁵

"...experts say we are moving back to the pre-antibiotic era. No. This will be a post-antibiotic era. In terms of new replacement antibiotics, the pipeline is virtually dry, especially for gram-negative bacteria. The cupboard is nearly bare."

She further warns:

"A post-antibiotic era means, in effect, an end to modern medicine as we know it. Things as common as strep throat or a child's scratched knee could once again kill."

The great importance of this disclosure was the realization that antimicrobial resistance which is developing worldwide is rendering current antibiotics useless. Microbe mutation typically necessitates the need for NEW antibiotics. Because of the extended timelines required for drug testing and approval, by the time a new antibiotic comes to market for a specific use, it may no longer be effective as the microbes have mutated further.

Electronic frequency based strategies, even though NOT considered or sold as medical devices, may provide the solutions to not only address but help prevent these life threatening mutations and further resistance but also to address most other pathogenic issues as well.

While conventional allopathic medicine may be failing, only those who rely totally on that model need be in danger. People CAN educate and prepare themselves now.

⁵ Antimicrobial Resistance in the European Union and the World, Dr.Margaret Chan, Director-General of the World Health Organization, Combating Antimicrobial Resistance: Time for Action

(keynote conference address), Copenhagen, Denmark 14 March 2012
<http://www.pulsedtechresearch.com/portfolio-items/antimicrobial-resistance-in-the-european-union-and-the-world/>

While a practitioner's guidance may be your best recommendations for determining your immediate needs, long term considerations for future needs are important too. When preparing for the future, when time is on your side, when there is time to educate one's self, this is when one may be better able to buy directly from manufacturer.

When folks become better educated, after immediate needs have cleared, most find they use the instruments regularly for day-to-day needs unrelated to the original

requirement. The modular and upgradable architecture of PulsedTech's family of products is both the reason for practitioners' choice in these instruments but also likely why they are rarely ever available on the used market.

With the current, rapidly deteriorating systems of health care, and the expectation of reduction in access to available treatment solutions, it makes logical and wise sense to consider alternative approaches to supplement or replace traditional care.
