The Electric Human

Electro-Therapeutic Approaches to Disease Management & Health Maintenance

With application considerations for Arthritis, Cancer, Lyme, Diabetes, Multiple Scierosis, Bacterial, Viral, Immune System, Pain, Wound Healing and other Non-Conventional Protocols Including Do-It-Yourself Projects for Electro-Therapeutic Experimentation and Education

Jimmie L. Holman, Dr. Steve Haltiwanger, MD, CCN, & others with a forward by Paul Dorneanu

Jimmie Holman, Steve Haltiwanger and PulsedTech associates take great pleasure in bringing the first formal release of *The Electric Human - Electro-Therapeutic Approaches to Disease Management and Health Maintenance*. *The Electric Human* is being presented FREE in an electronic form with individual components being available for easy online reading, download, or even local personal printing.

While initially envisioned for conventional printing and secured e-book commercial sale, as the content was assembled, it became quickly apparent by all involved, that something quite new and different would be needed to satisfy the special needs and requirements of not only the authors, but also the practical needs of the many individual users and readers. The technical nature of much of the content mandated extensive color illustration, which can become cost prohibitive in printed form and equally restrictive when considering electronic distribution even by e-book services due to the exceptionally large individual file sizes and page volume.

However, the unique architecture and format allows for users to select and retrieve those parts of value they need, when they need it and disregard parts of no interest....all on their own schedule.

The content is being made available in the universal PDF format so that users can easily move desired content to a computer, tablet, e-reader or smartphone for easy access and reference or to even print out and save in convenient loose-leaf format for personal use. High Resolution printing as well as Text-to-Speech have been enabled on most documents for users desiring those capabilities.

This format hosted by Pulsed Technologies Research allows for dynamic growth, additions, modifications and updates of this "living document". Select research blog articles, technical briefs, question & answers, and items of interest will be continually added making this a truly evolving resource which changes along with the technology's trends and discoveries yet maintaining the historical foundations and scientific references at its roots. The readers' needs and feedback help provide the direction and guidance to make this one of the most practical resources available about this technology.

Although being freely distributed for non-commercial use, we understand this is a valuable resource PulsedTech instrument user's need for most effective operation and performance, but also what users of other devices and potential buyers severely lack to make truly informed and educated decisions. Over the last few decades, we found much of the available content in public and private literature absent, misleading, confusing, or frankly technically wrong. We strive to help change this unfortunate industry situation.

The Electric Human is currently divided into topical main sections, each of which contains its own individual "active" Table of Contents linked to individual PDFs which range in different sizes.

Section 2 - Physics & Physiology - Dr. Steve

Haltiwanger and Jimmie Holman describe in both technical and layman terms the underlying electrical, chemical and energetic processes and their relationships to biological operation and wellness. An emphasis is placed on making these sometimes abstract concepts easy to understand from any perspective, be it scientist, researcher, doctor, patient or student. An understanding of these basic concepts will allow the user to better strategize and utilize these emerging and developing technologies for effective personal use.

Section 3 - Strategies & Considerations - Probably the most popular, informative, and useful area provides many separate papers on specific articles of interest. Most every topic has been the response of specific user inquiries. The "Strategies and Considerations Briefs" typically delve in more depth on matters of general interest and concern including information often (intentionally) neglected by many manufacturers. The "Questions & Answers" are the most often requested responses to pertinent technical questions about practical operation and use normally (but not always) referencing PulsedTech instruments or other popular devices by example. Certainly the area of most recent interest is the availability and release of the "Protocol" subsection where Pulsed Technologies Research is openly sharing our

concepts, strategies, considerations, and even speculations on issues related to specific common afflictions. Considerations are shared for strategic and

targeted approaches from the perspective of hopefully practitioner guided self-treatment.

Section 5 – (future use)

Section 6 - Appendix

Mr. Thomas Drake of the PulsedTech Research team will be managing the continually evolving materials and planned additions to this much needed resource. Mr. Drake and contributing associates may be contacted through the PulsedTechnologiesResearch.com website or Pulsed Technologies Research FACEBOOK pages.

We would like to express our sincere thanks to the many clients and readers who have helped us understand their special needs, perspectives, and situations, for it is for them this book is really dedicated. We sincerely hope you enjoy The Electric Human and look forward to hearing from you.
