Equipment design can have an enormous effect on the length of time needed for your path back to wellness. Some devices aren't even worth the time spent using them. Some devices are manufactured by well-intended individuals but lack critical features or waveform attributes that, if used, can lead to significant problems that the same device is incapable of addressing!

Each person represents a unique set of circumstances. Aside from specific infectious pathogens and parasites, among the most serious of contributors are the constant stream of poisons we expose ourselves to daily. Just as important are the foods we eat, both good and bad.

Even if good nutritious foods are consumed, the constant poisoning and stressing of biological systems by the endless environmental assaults minimize the progress made by other positive agents.

Each person needs to not only provide the nutrition and necessary supplementation, but seriously strive to totally eliminate ALL exposure to the toxic and stressful elements they are exposed to on a daily basis.

Addressing these issues will help assure the most efficient use of your equipment, time, and guarantee the most effective results.
