

What frequencies should I be using?

Q&A – Plasma/Contact Frequencies

- What frequencies should I be using?
- You can choose frequencies from the software’s library or from other sources. Most frequencies publically available are below 10,000 Hz. However, we recommended running Higher Frequencies. Laboratory evidence CLEARLY indicates higher frequencies are more effective. Precise waveform characteristics are also critical. This is also discussed in greater detail in the “Frequency Generation Considerations” document.

Public Protocols

For years, the primary public source for frequencies has been Brian McInturff’s “CAFL” – Consolidated Annotated Frequency List. This list is the composite of many different sources. This list is FREE and is a good “starting point” for further investigation.

CAFL – Consolidated Annotated Frequency List

- What frequencies should I be using?
- Its FREE !

Nenah Sylver’s RIFE HANDBOOK

- What frequencies should I be using?
- If you have only one book on the subject, THIS should be the one !

Unfortunately, the bulk of the frequencies have focused on lower frequencies; largely in the audio ranges with no actual correlation between specific frequency and actual modus operandi. This has been improved in Nenah Sylver’s Rife Handbook with many frequencies being provided from private research sources.

Special and Proprietary Protocols

For serious/critical needs, DNA frequencies, calculated and provided under license, could be your best bet. Especially if publically available content has provided results less than desired.

However, private protocols and logical strategies from serious researchers optimized for the specific instruments under consideration utilizing waveform components are also available. These protocols along with the special guidance of an experienced practitioner can make an enormous difference in the recovery.

Calculated DNA Frequencies Service

- What frequencies should I be using?
- Provides under license, custom calculated frequencies for your personal application
- **THIS SERVICE IS HIGHLY RECOMMENDED**

PULSED TECHNOLOGIES RESEARCH

Available via professional practitioners and by special arrangements are more detailed and explicit booklets and information sheets for consideration. Pulsed Technologies Research (USA) has worked extensively with select practitioners and experienced researchers to develop effective new strategies and approaches for Bioenergetics & Pulsed Technologies (EU) instruments not normally considered, practiced or available with other manufacturers' devices.
