Q&A – PFG Lab on a Mac

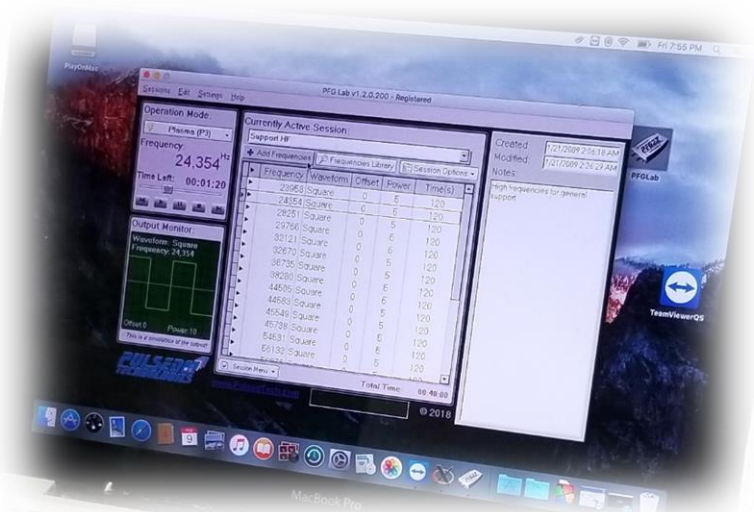

www.PulsedTechResearch.com www.PulsedTech.com www.PulsedTech.RO

Pulsed Technologies is often asked if our software will run on a Mac.

The PFG Lab was specifically written for Microsoft Windows which currently represents almost 90% of the desktop operating system market. Apple's MacOS is barely 8%¹ so the logical primary target design is of course has been the far more popular Windows environment. Pulsed Tech' support policy as well planned practical technical support has been and will continue to be focused on the Windows environment for which the software was originally designed.

This does NOT mean PulsedTech's PFG Lab software won't run on a Mac. In Fact, it most definitely WILL RUN on most later Mac's which utilize modern Intel processors.... Especially versions running Apples OS X and beyond.

An alternative of course has always been, running a full version of Windows via a Mac product like "Parallels" (appx \$75) plus the cost of the Windows OS (\$100+). This however easily exceeds the cost of a small Windows

netbook or Windows tablet which can be used as a dedicated device. In the past and still, a used or dedicated netbook or tablet has been our recommendation for most Mac users.

BUT!!!Pulsed Technologies has however designed and maintained the PFG Lab software and libraries in a manner so they may be freely integrated and operate on a Mac WITHOUT the cost associated with the solution mentioned above and operated essentially like any other native Mac Programs.

Pulsed Technologies will be making installations instructions and video available so that Mac users may also natively enjoy the ease and features of PulsedTech’s PFG Lab software in their familiar environment.

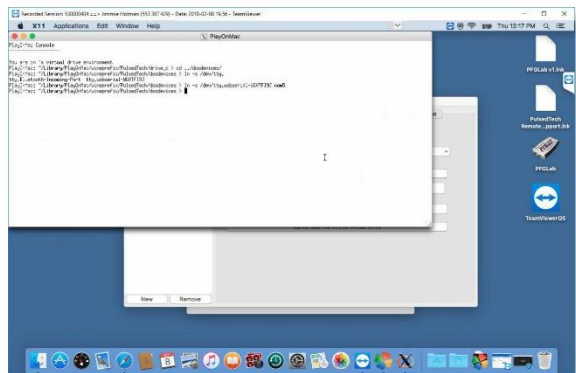

Although there are several methods available, currently we recommend:

The easy install of this FREE program will also include some supplementary support files as needed. Once run, it is used to then easily install the PFG Lab software into the Mac environment.

While there are other similar programs, most all have one serious failing, that being the way Apple has chosen to address serial devices. But even that can be manually overcome and once set should provide a relatively identical platform and operation to the windows environment.

Detailed Installation Instructions, Recommendations, and Video may be found on the Pulsed Technologies Sales and Support website at:
