

Embracing & Developing New Trends for Wellness

... Assisting a Return to Natural Health

By Justin Allen

Introduction

Although public interest in the procedures and results of alternative health remedies and technologies is becoming more widespread, there are many integrative health professionals who are realizing the difficulties in turning that public interest into *public understanding*. Aggressive innovation is the primary component to advancing any new and influential knowledge that can affect the way humans perform certain tasks; especially those concerned with our health and wellness. With new and more natural treatment routines such as using frequency-specific technology and chelation, many potentially harmful orthodox treatments, such as chemotherapy and cancer surgeries, are being successfully left behind by patients during their pursuit of effective health reclamation. However, numerous clients who have found themselves navigating the path back to optimal health through alternative modalities are left with incorrect or incomplete guidance because many practitioners are also not very well educated on these potential new forms of therapy. Nevertheless, there are still many within the field of alternative health treatments that are working extensively to embrace and maintain forward progress in promoting and developing these tools that are gradually re-shaping the trends in personal health care.

One of the rising stars in the innovation of these new modalities is Jordan DeJonge, an associate with the Born Clinic of Preventative Health Care in Grand Rapids, Michigan. While the clinic's primary focus is integrative medicine, it is Jordan who is one of the leading innovators in these new technologies. It shouldn't be such a surprise that his dedication and innovation have created such forward movement in these areas of innovation as he is the son of the late Dr. Robert DeJonge.

Mr. Jordan DeJonge is a technologist working with the Born Preventative Health Care Clinic in Grand Rapids, Michigan, where he assists clients with biofeedback assessment sessions and handles a list of other responsibilities as well. Jordan's father, the late Dr. Robert DeJonge, was widely-known and applauded for his research on and speeches given over Lyme disease, complimentary medicine, and autism. That "inherited" enthusiasm to help people in need now exhibits itself through Jordan's own unique efforts and progress in developing new tools and protocols that will help bring clients to an optimal health status. To accomplish his goal of providing the best care and consultation, he works closely with the manufacturers that offer the required therapy modules, the tools, by maintaining a flow of communication with them that allows him to keep up to date with any headway or adjustments within the scope of these alternative strategies. As an experienced practitioner, he also has the liberty to openly suggest guided methods which can be employed with these new instruments and tools; a limitation that is often encountered by many equipment manufacturers of integrative health technologies. Jordan has also done exceptionally well in bringing his passion to the digital forefront in order to generate exposure for these alternative health methods. Those interested can find that on www.YouTube.com, he has uploaded a wide number of user experiences, instructional videos for equipment usage and software utility, and presentations of multiple instruments he has obtained from companies such as Zyto and Pulsed Technologies, that briefly describe their capabilities and potential. His initiative to convey as much possible quality information about these unique assessment methods and treatment technologies is a worthy marker from which many other practitioners can take note.

Jordan has gained much experience in his years spent working with alternative remedies and indeed carries his own distinct outlook when it comes to caring for clients: "Everything can be structured with frequencies," he claims, "...you're avoiding labeling something as a disease which [I honestly feel] can affect belief structure and have potential psychosomatic consequences." Over time he has gathered an extensive digital library of these unique frequencies that

he uses with software provided for remote assessments and therapy sessions which has reduced his total workload and increased his labor's all-around effectiveness greatly. His number of daily visits has shrunk from seeing nearly 15 people a day to approximately 12 per week. At the Born Preventative Health Care Clinic, Mr. DeJonge also has the authority to discuss with users a recommended and affordable supplemental regimen to follow alongside treatment. He mentions that, "One legitimate complaint that I've heard many times, and also agree with, is that the

Jordan's passion and activism for helping produce wide information about alternative health therapies has become, in a way, a call to arms for other practitioners to encourage those in medical need to seek out natural and alternative methods of treatment

Zyto Data Assessments direct many users to the private and more expensive supplement companies. I consider not only the supplements for clients, but also health food items they may require. I help direct them to quality brands like NOW, which produces supplements for more affordable prices than other companies that may be caught in multi-level market schemes.” His concern for healthy treatment solidifies itself when it’s realized that Jordan is not only working to assist others, but he has been working closely with companies like Pulsed Technologies for *his* benefit as well; to develop means that better help with controlling his own Lyme symptoms when needed. So, not only is Jordan DeJonge a dedicated practitioner, he is also one of his own clients.

For this article, I discussed with Mr. DeJonge his various responsibilities at the Born Clinic and his preferred methods of therapy and interaction with patients, amongst other aspects of his career. His enthusiasm to innovate these fresh modalities is clear when he speaks of his personal research and trials conducted in order to provide the public with the clearest guidance that highlights the importance of taking charge of one’s own health.

How long have you been working with the Born Clinic and what are your responsibilities there?

“I’ve worked at Born Clinic since 2009 and my responsibilities at first were running the Ondamed and interpreting frequency data. Now I am in charge of running the Zyto to determine which frequencies to run through the PFG/P3 Pro and again interpreting data for physicians.”

How did you become involved with the work that you're doing now?

“I became involved when I was offered a chance to learn to conduct biofeedback with both the Asyra and Ondamed, both now considered relatively older systems. However, during an extended training session, I was able to view a demonstration on how to utilize the machinery which was extremely helpful in giving me new insights I had not yet considered.”

Was there any specific reason you had for wanting to work with the development of these technologies?

“I enjoy assisting in the continued development of these technologies because it's not only necessary for my clients, it has also helped me overcome any Lyme symptom I've had. The conventional medical community is doing a horrible job at diagnosing and treating tick-borne illness, especially combined with fungal co-infections.”

What work (development) do you do with the Pulsed Technologies instruments? Are you dedicating personal time to developing possible new features for the instruments you're using?

“Specific development work that I have done is fairly extensive. The first thing I personally worked on was inputting frequencies into the Zyto which now numbers just under 9000 separate frequencies. Zyto has always been used to input digital signatures of supplements and I wondered, “Why not frequencies?”

So Pulsed Technologies private library, the CAFL, Hulda Clark's frequencies, etc. were all compiled with descriptions into the Zyto. There are standard lists like my PPLED library – which lists 574 basic frequencies - and then micro-step variations that are absolutely necessary to find high distributions "hits" on clients. The Pulsed Technologies PPLED, PFG, and P3 have all gone through such great improvements since I've been working with them that I'm truly blown away by the development. The VAS (vascular autonomic signal/vascular tension change) method is one strategy that I've never fully abandoned and which I learned with Ondamed and now applied to the Pulsed Tech instruments which gives me a lot more detail. PulsedTech makes software available with specific calculators and other programs to help find a direct map of frequencies responding to the client which may not be represented in my Zyto frequency list."

Other than the Pulsed Technologies products, what other modalities do you use to help clients? Can those instruments be used alongside PT equipment in the same regimen for treatment?

"Other than Pulsed Tech equipment, I now only use the Zyto, which again suggests to me what frequencies should be input into the PFGLab software. The frequencies I have can be shared through my common license with other practices under the "select" license I'm told. Most people coming to me usually don't have a diagnosis. With the Zyto assessment and Pulsed Tech frequencies exposure and responses usually lead to specific traditional blood work the doctors can use to direct therapy."

What was it that caused you to begin using the frequency equipment built by Pulsed Technologies after having used a competitor's machines beforehand?

"I was using the PFG2z side by side with the Ondamed for around a year. The PFG was outperforming a much more expensive unit so the choice wasn't based on specs or internet reviews; it was based on actual outcomes which were greatly improved with the PFG2Z/PPLED combo I initially purchased. The business environment at that time was moving to cash based at the same time as insurances were becoming more constrictive and the clients' insurance companies basically stopped coming through so it was up to them to locate effective therapy on their own."

How did your managers respond to you bringing in the Pulsed Tech equipment to integrate usage for clients? Did the Born Clinic already use resonant frequency or pulse generation for any treatments?

"My managers quickly saw the same thing my clients did which was being able to effectively address more issues in less time due to higher and more accurate frequencies. The frequencies and instruments were also much friendlier to multiple-chemical sensitivity and electro-sensitive people, so there were less contra-indications to this and happier clients."

Do you perform any treatments for clients yourself? Do you assist practitioners with administering treatments?

"I run the machines for the clients and I assist in set up programs as needed for them to run on their own devices. I also give a demonstration to clients that are unaware of the purpose to what I am showing and help them better understand the unit function also."

At a time when people with declining health have been abandoned by conventional therapies, exhausted their insurance's coverage and financial resources, and continue to search for more favorable and overall more beneficial means, the tireless efforts of ambitious men and women such as Jordan DeJonge continue to culminate more stage-time for the premiere of these new alternative solutions. The matter of regaining and maintaining one's health rightfully should remain the responsibility of the individual; however, the journey to locating these methods should not have to be taken alone. The guidance already made available by Mr. DeJonge and others working with integrative health technologies is a strong reminder that there are truly concerned professionals passionately looking to help those with medical needs in a natural and effective way. Jimmie Holman of Pulsed Technologies Research has worked closely with Jordan on many occasions and speaks very well of his exceptional efforts and successes. He says that, "Jordan has made wonderful contributions to the technology and has provided valuable insights for practical and future use." He also praises, "It is tremendously rewarding for a designer to see his work being fully understood and well utilized for its intended purposes and beyond. Very few that have been introduced to these technologies have taken them to the public stage with the same enthusiasm and competence as Jordan. He seems to have hit the ground running with no stopping in mind for any time soon. This is what *the healing art* should be!"

In short, it is clear that Jordan DeJonge's desire to develop accessible integrative therapy technologies with the very best tools available and promote information for the concerned public has set a smooth cornerstone for others to build upon while working to influence these blossoming trends in fulfilling personal health and wellness needs.
