

**EMERGENCY OR PORTABLE POWER FOR THE  
PULSED TECHNOLOGIES PFG2Z PRECISION FUNCTION GENERATOR**

The PFG2z, as are most Pulsed Technologies instruments, are designed to be able to operate with minimal power requirements. Shown here with single 12 volt rechargeable battery, simple 90-100 watt power inverter to convert 12 volt DC into 110-120 volt AC, (similar units available for 220 volt), and small solar panel for replenishing battery as needed. Note: This configuration can also be used to charge small laptop computer or tablet as shown here. Also note the 5 volt USB power port for charging additional computer accessories
