

Bosnia Expedition - 2017

Pulsed Technologies' Jimmie Holman and Paul Dorneanu will be in Bosnia-Herzegovina during April 2017 at the Bosnian Pyramids near Visoko just northwest of Sarajevo. An in-depth research expedition is planned to further investigate and possibly measure some of the phenomena found at the Pyramids of the Sun, the Moon, the Dragon, and of Love.

While much controversy surrounds these structures, our host Semir "Sam" Osmanagic, continues to find validation for many of claims and speculations unveiled so far. The politics of archaeology are but one of the puzzle pieces that must, and most likely will, change and evolve over time as more is discovered and revealed allowing a clear picture to emerge.

For the last several years, both Dorneanu and Holman have been researching bioenergetic, bioelectric and physiological issues in conjunction with Pulsed Technologies VSG – VitaSet Generator project and the crucial human requirement for the earth's natural Schumann Resonances as well as other natural signals.

Holman and Dorneanu will be lecturing in Bosnia in mid-April (2017) and revealing new insights of their recent work adding more validating pieces to the Bosnian Pyramids puzzle.

Both Jimmie & Paul look forward to sharing their experiences and photos in the coming weeks.
